

CH Anchor Complete System

LESS HASSLE SAVES TIME.

The CH System allows you to install a CH base anchor in about 5 minutes. You no longer have to pour concrete, dig a hole and hope that nothing happens to it that requires that you to do it all over again — things like erosion, freezing & thawing, and, worst of all, hitting the anchor with an implement). If this happens to CH Anchors, it takes only a few minutes with the CH Driver to re-position and you're back playing ball.

LONG-LASTING DURABILITY.

CH Anchors are made out of heavy duty steel. CH Anchors last 5-10 times longer than the traditional anchors. The CH Base Anchor and CH driver system is built to last for many years of hard use.

SAVE MONEY!

The time you save using the CH System is enough to outweigh the cost of doing it the concrete way — TIME IS MONEY! Additionally, when you consider the life expectancy of the CH Anchor is 5-10 times longer, the decision is much easier. Also, remember that once you have the CH Driver you don't need to purchase another one because you can use it over and over. All you need to do after the first CH Driver purchase is purchase additional CH Anchors.

FEATURES

- Excellent for fields with multiple base lengths
- Install a CH base anchor in about 5 minutes
- No digging or concrete needed
- Extremely durable, heavy duty steel
- All anchor types easily re-positioned with the same driver
- Anchors last 5-10 times longer than the traditional anchors
- All anchor types easily re-positioned with the same driver
